Greywater recycling system

## Recycle and reuse your household water with WaterGurus NovaGrey

WaterGurus NovaGrey greywater recycling system allows you to recycle and reuse all of your household greywater.

Designed and manufactured in Australia by WaterGurus, the NovaGrey uses the latest greywater recycling technology to provide your household with safe reusable water that can be used again and again.

*Save water and money with NovaGrey*

### About The System

NovaGrey is a streamline, domestic greywater treatment system that can be neatly installed beside your house with no excavation required. You can choose from four standard colours to match your house and landscaping.

The NovaGrey system is an advanced treatment process using the latest water recycling technology. It doesn't just divert your household greywater, it uses WaterGurus's patented MembraneSafe™ technology to treat and recycle domestic greywater to an exceptionally high standard.

*Choose the size and colour to fit your house and lifestyle*

### Suitable for Everyone

NovaGrey is suitable for installation in all areas (including sewered and unsewered). It can recycle up to 1148 litres of grey-water per day, producing high quality, recycled water ideal for:

- use in the laundry
- flushing the toilet
- surface and subsurface irrigation
- washing your car
- external hosing.

The system is 1410mm in height and approximately 800mm<sup>2</sup> and has been designed to be installed above ground.

### Features and Benefits

- Proven and reliable WaterGurus MembraneSafe™ technology
- Chemical-free process
- Minimal noise
- Completely odour free
- Slimline and lightweight
- Easy to install
- Save on electricity as it hibernates when not in use
- Small footprint
- Available in four standard colour
- Choose your own tank and water storage capacity
